

REVISED
JOINT
PUBLIC NOTICE

CHARLESTON DISTRICT, CORPS OF ENGINEERS
1949 Industrial Park Road, Room 140
Conway, South Carolina 29526
and the
S.C. DEPARTMENT OF HEALTH AND ENVIRONMENTAL CONTROL
OFFICE OF OCEAN AND COASTAL RESOURCE MANAGEMENT
1362 McMillan Avenue, Suite 400
Charleston, South Carolina 29405

REGULATORY DIVISION

MARCH 9, 2007

Refer to: P/N #2006-1090-3II-P (REVISED)

Pursuant to Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403), Sections 401 and 404 of the Clean Water Act (33 U.S.C. 1344), and the South Carolina Coastal Zone Management Act (48-39-10 et. seq.) an application has been submitted to the Department of the Army and the S.C. Department of Health and Environmental Control by

REED B. TURNER
c/o WILLIAMS LAND MANAGEMENT CO.
2011 CHERRY STREET
GEORGETOWN, SOUTH CAROLINA 29440

for a permit to construct sub-impoundments, excavate an inlet canal, and install a water control structures in an existing impoundment along the

NORTH SANTEE RIVER

at a location south of Barnyard Road in Kinloch Plantation, south of the City of Georgetown, Georgetown County, South Carolina (Latitude 33.19611°, Longitude 79.34528).

In order to give all interested parties an opportunity to express their views

NOTICE

is hereby given that written statements regarding the proposed work will be received by both of the above mentioned offices until

12 O'CLOCK NOON, MONDAY, APRIL 9, 2007

from those interested in the activity and whose interests may be affected by the proposed work.

The proposed revisions consists placing fill material in and excavating waters of the United States to create a new inlet canal, install two new water control structures and create three new sub-impoundments within the existing Camp Main impoundment located adjacent to and northeast of the North Santee River. In detail, the applicant proposes to excavate a 50' X 5' X 5' inlet canal (46.2 cu. yds.) from the North Santee River to the existing, exterior dike. A 2' X 5' X 28' water control structure will be placed in the exterior dike (Site 1A on page 2 of 6) to connect inlet canal to an existing 2500' interior canal. The applicant proposes to utilize a track hoe situated in the marsh to excavate the canal. The excavated material will be temporarily stockpiled in the marsh. Once the canal is excavated, the spoil material will be relocated to the adjacent exterior dike and the marsh returned to original contour and allowed to re-vegetate naturally. The excavation of the inlet canal will result in the temporary impact of approximately 0.01 acres of freshwater wetlands.

The interior canal will be excavated to the approximate original depth of 5'. All material excavated from the interior canal will be placed on the adjacent dike/roadway. A new 2' X 4' X 24' spillway/riser structure will be placed between the interior canal and impoundment #3 to control water levels in the impoundment. In addition, the applicant proposes to fill 0.02 acres of wetlands to create 3 new sub-impoundments within an existing impoundment. In detail, the applicant proposes to place fill material in waters of the United States in order to extend the existing Newland Canal Dike 25.0' on both ends and connect it to the existing exterior dike to create a 110.0 acre impoundment (depicted as #4 on page 2 of 6). The applicant also proposes to extend the existing Settlement Islands Dike 25.0' on the southeast end to create a 90.0 acre impoundment (depicted as #5 on page 2 of 6) and a 110.0 acre impoundment (depicted as #6 on page 2 of 6). The purpose of the proposed work, according to the applicant, is to improve the existing impoundment to more effectively manage the area for waterfowl.

NOTE: Plans depicting the work described in this notice are available and will be provided, upon receipt of a written request, to anyone that is interested in obtaining a copy of the plans for the specific project. The request must identify the project of interest by public notice number and a self-addressed stamped envelope must also be provided for mailing the drawings to you. Your request for drawings should be addressed to the

**U.S. Army Corps of Engineers
ATTN: REGULATORY DIVISION
1949 Industrial Park Road, Room 140
Conway, South Carolina 29526**

The District Engineer has concluded that the discharges associated with this project, both direct and indirect, should be reviewed by the South Carolina Department of Health and Environmental Control in accordance with provisions of Section 401 of the Clean Water Act. As such, this notice constitutes a request, on behalf of the applicant, for certification that this project will comply with applicable effluent limitations and water quality standards. The work shown on this application must also be certified as consistent with applicable provisions the Coastal Zone Management Program (15 CFR 930). The District Engineer will not process this application to a conclusion until such certifications are received. The applicant is hereby advised that supplemental information may be required by the State to facilitate the review.

This notice initiates the Essential Fish Habitat (EFH) consultation requirements of the Magnuson-Stevens Fishery Conservation and Management Act. Implementation of the proposed project would impact 0.03 acres of estuarine substrates and emergent wetlands utilized by various life stages of species comprising the red drum, shrimp, and snapper-grouper management complexes. Our initial determination is that the proposed action would not have a substantial individual or cumulative adverse impact on EFH or fisheries managed by the South Atlantic Fishery Management Council and the National Marine Fisheries Service (NMFS). Our final determination relative to project impacts and the need for mitigation measures is subject to review by and coordination with the NMFS.

The District Engineer has consulted the most recently available information and has determined that the project will have no effect on any Federally endangered, threatened, or proposed species and will not result in the destruction or adverse modification of designated or proposed critical habitat. This public notice serves as a request to the U.S. Fish and Wildlife Service and the National Marine Fisheries Service for any additional information they may have on whether any listed or proposed endangered or threatened species or designated or proposed critical habitat may be present in the area which would be affected by the activity, pursuant to Section 7(c) of the Endangered Species Act of 1973 (as amended).

Pursuant to Section 106 of the National Historic Preservation Act (NHPA), this public notice also constitutes a request to Indian Tribes to notify the District Engineer of any historic Properties of religious and cultural significance to them that may be affected by the proposed undertaking.

In accordance with the NHPA, the District Engineer has consulted the latest published version of the National Register of Historic Places for the presence or absence of registered properties, or properties listed as being eligible for inclusion therein, and this worksite is not included as a registered property or property listed as being eligible for inclusion in the Register. Consultation of the National Register constitutes the extent of cultural resource investigations by the District Engineer, and he is otherwise unaware of the presence of such resources. Presently unknown archaeological, scientific, pre-historical, or historical data may be lost or destroyed by the work to be accomplished under the requested permit.

Any person may request, in writing, within the comment period specified in this notice, that a public hearing be held to consider this application. Requests for a public hearing shall state, with particularity, the reasons for holding a public hearing.

The decision whether to issue a permit will be based on an evaluation of the probable impact including cumulative impacts of the activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the project must be balanced against its reasonably foreseeable detriments. All factors which may be relevant to the project will be considered including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, flood plain values, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production and, in general, the needs and welfare of the people. A permit will be granted unless the District Engineer determines that it would be contrary to the public interest. In cases of conflicting property rights, the Corps of Engineers cannot undertake to adjudicate rival claims.

The Corps of Engineers is soliciting comments from the public; Federal, state, and local agencies and officials; Indian Tribes; and other interested parties in order to consider and evaluate the impacts of this activity. Any comments received will be considered by the Corps of Engineers to determine whether to issue, modify, condition or deny a permit for this project. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and the other public interest factors listed above. Comments are used in the preparation of an Environmental Assessment and/or an Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the activity.

If there are any questions concerning this public notice, please contact Tommy Fennel at 843-365-4239.
